

# Get ready for fall, y'all!

Strengthen your defenses against COVID-19 soon so you can better protect the people you love this fall.

Everyone 6 months old and older can get an updated shot.

## You can get the updated shot if

- you've never gotten a COVID-19 shot before OR
- you got your last COVID-19 shot more than 2 months ago.

The updated shot is for everyone 6 months old and older, but it really helps **older adults and people with health problems.**

People with a very **weak immune system** might need to get more updated shots.

**Ask your provider to see if the updated vaccine is right for you!**
